

(a) both L lift: $\lambda_2 \approx 0$ (disconnected)

(b) WISE: one L relays: $\lambda_2 \geq \sigma_{\text{req}}$

$$1L_{\text{lift}} + 2S_{\text{relay}} \rightarrow 1L_{\text{relay}} + 2S_{\text{lift}}: \Delta BZ = \Delta w = \Delta V = 0, \quad \Delta \lambda_2 > 0$$
